

Industries

Solid conceptual work and the ability to recognise client needs combined with optimally matched technical solutions, these are the unmistakable trademarks of SCHADE engineers. The highly motivated team draws on profound knowledge of process technology, for example in the power station sector, in the cement industry, in iron and steel production, in mining and minerals as well as in the chemical industry. Moreover SCHADE engineers have also brought a multitude of projects in ports and terminals, the pulp and paper industry, the agricultural and other sectors sector to a successful conclusion.

Customers worldwide trust in SCHADE solutions for storage, blending and reclaiming of coal, lignite, FGD gypsum, limestone, clay, coal, petcoke, gypsum, slag, additives, iron ore, bauxite, fertilisers, potash and phosphates. The intensive exchange with customers on each project and its particular details serve as guarantor for optimum concepts.
